CERTIFICATIONS

Continuing our commitment to our purpose and corporate social responsibility policy, Industria Chiquibul's efforts to be globally recognized by certificatory entities and environmental plans are constantly growing. With the field and plant visit of independent consultants and our sustainability team participation in the RSPO annually conference in Miami, Florida, Industria Chiquibul ended the month of May with a step forward towards achieving RSPO. The company is expecting to submit its RSPO application by the end of 2023.

CORPORATE NEWS

We are proud to announce that Industria Chiquibul has committed to become a purpose-driven company and brand.

“Somos la Gota que Impulsa el Desarrollo” – the base of our purpose, referring to the company's logo, the palm oil drop that promotes the sustainable and socioeconomic development of our workers and communities in Alta Verapaz and Peten.

Promoting the development of the country, drop by drop through providing social development, education and growth opportunities. Our purpose shapes the positive impact we want to promote in Guatemala and the world, by connecting with people from the start and doing things right, while being conscious with our environment. It guides the way the corporation thinks and acts. Palm oil is the base of multiple care and food products globally, and at Industria Chiquibul we are committed to contribute with the global supply by being the drop that encourages development and progress.

COMMUNITY RELATIONS

Industria Chiquibul is reinventing its social responsibility and environmental policies, aligning our policies to our continuously growing, changing and challenging world. Attached you will find our new NDPE policy and reforestation program, all under our recently introduced social branch “Somos Conservacion.”

During May 2023, Industria Chiquibul completed the second phase of its biodigesters and effluent water treatment system which will reduce greenhouse emissions significantly by capturing and burning methane produced in the oxidization ponds. In compliance to our environmental and social responsibility policy and contributing to the environment by reducing the company's carbon footprint by an estimated 60%, while improving water quality used for irrigation significantly.

Check out our YouTube channel to watch the complete process of our effluent water treatment system function.

During May, the corporation continued its monthly food baskets program, aligned to our Food Security and Hunger Zero commitment to neighboring communities and collaborators.
