## COMMUNITY RELATIONS

Reiterating our commitment to Food Security in the regions of Alta Verapaz and Peten, in March 2023 Industria Chiquibul introduced its Subsistence Farming Program where 40 families participated in a first call. Around 90 square meters of vegetable gardens in the community of Tierra Blanca 5000 were planted during the first month of the program.

The main objective of the Subsistence Farming program is to give the opportunity to surrounding communities to plant and harvest home gardens with basic food basket crops that can be used for personal consumption or to generate income through local business. The program also seeks to promote women inclusion and empowerment by giving them the technical support to plant and manage their crops with good agricultural practices.

Industria Chiquibul will be donating seeds, technical training and support and chemical and organic fertilizers to interested communities. It is expected that by the end of 2023, more than 100 families in the region will be benefited from the program.

## CORPORATE NEWS

At Industria Chiquibul we believe in the inclusion and empowerment of women in the region. During the month of March, the company commemorated women through different programs and activities, playing an important role in their social, professional and economic development. Learn more about women in the industry by clicking [here](#).

In order to inspire other women in the regions of Alta Verapaz and Peten, Delsy Roman presented her self-growth and professional development story together with Industria Chiquibul. Delsy is a laboratory analyst at the company, who comes from a family with limited economic resources. She began working at Industria Chiquibul as a cleaning staff and thanks to her commitment and the company's help she has grown professionally and economically. Learn more about her story by clicking [this link](#) to our YouTube channel.

## CERTIFICATIONS

Committed to the environment and ecological preservation, during the month of March Industria Chiquibul is working to complete its new environmental job.

The biodigesters project to capture methane is expected to be finished by April 2023. This will help reduce process greenhouse emissions significantly and help the environment.
