

## People and Prosperity

At Industria Chiquibul we are committed with welfare and professional growth. Continuing with our training programs, during the past month more than 55 plant and field collaborators were given first aid training classes and skills during different scenarios, in compliance with safety and health protocols.

Also, in alliance with CONAP – Consejo Nacional de Areas Protegidas- training on basic techniques for preventing and combating forest fires was also given to collaborators during the past month. The main objective of this training was to develop capacities and provide the necessary skills for preventing and combating forest fires around our plantation and conservation areas. As a company, we continue to provide our people opportunities for self growth and sustainable development

## Planet

During March, at Industria Chiquibul we partnered with AGREQUIMA to bring our first agrochemicals' empty containers collection day, under the "Campo Limpio" incentive. This program objective focuses on motivating and increasing the participation of stakeholders in the food production and distribution chain, and ensuring safe final disposal of all empty agricultural products packaging and containers; teaching different techniques and adequate management for safely disposal.

Stakeholders involved include small producers in agricultural activities and supply chain, neighboring companies, and local communities located in Franja Transversal del Norte (Chisec, Alta Verapaz, Sayaxché, and Petén)
