Water Monitoring for Environmental Protection

Throughout May, at Industria Chiquibul we conducted regular monitoring of water sources and wastewater across our operations, reinforcing our commitment with responsible water resource management and environmental protection.

Promoting Circular Economy

As part of our responsible waste management program, during May we carried out a cleanup and material sorting initiative, recovering 54.9 metric tons of metal. This is one of our many efforts to promote circular economy and the efficient use of resources in our operations.

Prosperity

Supporting the Development of Future Professionals

Continuing with our education programs, we welcomed a group of Agronomy Engineer students from the Regional University of Guatemala, Cobán campus, for an educational visit to our operations. The experience provided valuable insight into our production processes and the sustainable practices that support our agro-industrial activities.

Promoting Transparency and Community Engagement

During May, we welcomed community leaders from La Caoba and Nuevo Edén for a guided tour of our facilities, where we shared information about our production processes, environmental practices, and clean energy initiatives. These opportunities strengthen trust, foster dialogue, and reinforce our commitment to responsible and transparent operations.

Strengthening Capabilities Through Collaboration

We also welcomed a technical team from Mayafert for a valuable exchange of agricultural knowledge and best agricultural practices, strengthening our team's capabilities for a more efficient and sustainable agriculture.
